SUMMARY

Backend engineer with 2+ years of experience building and operating microservices and REST APIs in Java, Spring Boot, and Node.js. Focused on performance and reliability — cut data-retrieval latency by 40% through service redesign, improved data processing efficiency by 10-15% through PostgreSQL query tuning, and automated manual workflows to raise team output by 25-30%. Owns problems end to end: traces production issues across upstream and downstream systems to root cause, and ships changes backed by unit tests and CI/CD. Strong fundamentals in data structures, concurrency, and distributed systems.

TECHNICAL SKILLS

Backend: Java, Spring Boot, Spring MVC, Hibernate/JPA, Node.js, Express.js, Flask, REST API Design, Microservices

Languages: Java, Python, JavaScript, TypeScript, SQL, PL/SQL, Bash, C++

Databases: PostgreSQL, MySQL, MongoDB, PL/SQL, Databricks, Schema Design, Query Optimization, Indexing

Cloud & DevOps: AWS, Docker, Jenkins, CI/CD Pipelines, Control-M, Linux, Git, GitHub

Testing & Quality: JUnit, Mockito, Unit & Integration Testing, Debugging, Root-Cause Analysis, Code Review

Concepts: Data Structures & Algorithms, Object-Oriented Design, System Design, Distributed Systems, Multithreading & Concurrency, Scalability, JWT

AI-Assisted Development: Cursor, Claude Code, GitHub Copilot, OpenAI API, LangChain

WORK EXPERIENCE

System Engineer

July 2024 - September 2026

Tata Consultancy Services - Digital

Indore, India

- Designed and shipped a Spring Boot microservice with RESTful APIs end to end — requirements through production release — cutting data-retrieval latency by **40%** while leading a cross-functional team.
- Tuned PostgreSQL schemas, functions, views, and complex queries over high-volume data, improving processing efficiency by **10-15%**.
- Automated a manual weekly reporting process using Java, Spring Boot, and Cron-based scheduling, increasing team output by **25-30%** and eliminating recurring operational effort.
- Automated build, test, and deployment stages through Jenkins CI/CD pipelines, backed by JUnit and Mockito unit tests and peer code review.
- Debugged large, unfamiliar legacy codebases and analysed interdependencies across upstream and downstream systems to resolve production issues at the root cause.
- Partnered with business stakeholders to translate requirements into technical solutions, delivering consistently to timelines.

Tech Stack: Java, Spring Boot, PostgreSQL, Microservices, REST APIs, JUnit, Mockito, Jenkins, CI/CD, Control-M, SQL, Git, Linux.

React/QGIS Developer ([Intern](#))

March 2024 - June 2024

M.P. State Electronics Development Corporation Ltd.

Bhopal, India

- Built GIS features in React backed by MySQL — basemap switching, polygon drawing, KML upload, buffer creation — improving mapping flexibility by **30-35%**.
- Redesigned the vector editing workflow, speeding up geospatial data processing by **25%** and reducing data discrepancies.

Tech Stack: React, QGIS, MySQL, Git.

Full Stack Developer ([Intern](#))

January 2024 - March 2024

Calculus Carbon

Remote

- Built a full-stack Risk Analysis Tool with Next.js, Node.js, and PostgreSQL, simplifying data processing and speeding up decision-making by **25-28%**.
- Developed a responsive Next.js architecture against REST APIs, improving application scalability by **30-35%**.

Tech Stack: Next.js, React, TypeScript/JavaScript, Node.js, PostgreSQL, REST APIs, HTML/CSS, Git.

PROJECTS

YouTube Comment Triage (Python, asyncio, httpx, YouTube Data API, Jev API, Streamlit) | [Live Demo](#) | [GitHub](#)

- Built a Python service that fetches up to 200 comments through the paginated YouTube Data API and classifies each via a third-party decision API, ranking those worth a reply; deployed live on Streamlit Cloud.
- Ran classification calls concurrently with asyncio and HTTP/2 under a semaphore, with exponential-backoff retries on 429/529 and index-stable result slots so out-of-order completions never mislabel rows.
- Added cost and abuse controls — a daily run cap, per-video result caching, and rerun-safe session state — with no database, keeping well within YouTube's 30-day data-retention policy.

Flight Booking AI (Node.js, Express, Python, Flask, OpenAI, React, RapidAPI) | [GitHub](#)

- Built a Node.js/Express API layer orchestrating requests between a React client and a Python/Flask service, turning free-text input into structured third-party API calls.
- Designed a modular provider adapter so upstream APIs can be swapped through configuration rather than code changes, with input validation before downstream calls.

ACHIEVEMENTS AND HONORS

- Solved 400+ Data Structures & Algorithms problems on [LeetCode](#).
- Regional Finalist, TCS AI Hackathon (Top 3, Indore): built an AI solution using Python, vector embeddings, and RAG.
- National-level Football Player, CBSE Cluster Nationals, St. Joseph Co-Ed School — November 2019.

EDUCATION

B.Tech in Computer Science Engineering (Specialization: Gaming)

Vellore Institute of Technology, Bhopal, India

Sept 2020 - Oct 2024

CGPA: 8.22
