SUMMARY

Software Engineer with 2+ years of experience building full-stack applications and microservices-based systems in Java, Spring Boot, Python, React, and SQL. Focused on automating manual processes and reducing operational workload — cutting data-retrieval latency by 40% and raising team output by 25-30% through automation. Works across the stack from front-end interfaces to backend services and databases, partnering with business teams to ship customer-facing solutions. Strong in data structures and algorithms, with a keen interest in high-scale transaction and payment systems.

TECHNICAL SKILLS

Languages: Java, Python, C++, JavaScript, TypeScript, SQL, Bash

Frameworks: Node.js, Express.js, React, Next.js, Angular, Spring Boot, Spring MVC, Hibernate/JPA

Cloud & DevOps: AWS, Docker, Jenkins, CI/CD Pipelines, Git, GitHub, Control-M, Linux

Databases: PostgreSQL, MySQL, MongoDB, PL/SQL, Databricks

Concepts: Data Structures & Algorithms, Object-Oriented Design, Microservices, REST APIs, Distributed Systems, Multithreading & Concurrency, System Design, Scalability, JWT

Practices & Quality: Automation & Operational Excellence, JUnit, Mockito, Unit & Integration Testing, Debugging, Agile/Scrum, Jira

AI-Assisted Development: GitHub Copilot, OpenAI API, LangChain, RAG, Vector Embeddings

WORK EXPERIENCE

System Engineer

July 2024 - Present

Tata Consultancy Services - DigitalIndore, India

- Automated a manual weekly reporting process using Java, Spring Boot, and Cron-based scheduling, increasing team output by **25-30%** and eliminating recurring operational effort.
- Designed and shipped a Spring Boot microservice with RESTful APIs, leading a cross-functional team from requirements through design, testing, and production release — cutting data-retrieval time by **40%**.
- Tuned PostgreSQL functions, views, and complex queries, improving data modeling and processing efficiency by **10-15%**.
- Reduced release toil by automating build, test, and deployment stages through Jenkins CI/CD pipelines, backed by JUnit and Mockito unit tests and peer code review.
- Debugged large, unfamiliar legacy codebases and analysed non-trivial interdependencies across upstream and downstream systems to resolve production issues.
- Partnered with business stakeholders and non-technical teams to translate requirements into technical solutions, delivering consistently to timelines.
- Tech Stack:** Java, Spring Boot, PostgreSQL, Angular, Microservices, REST APIs, JUnit, Jenkins, CI/CD, Cron/Scheduling, SQL, Git.

React/QGIS Developer ([Intern](#))

March 2024 - June 2024

M.P. State Electronics Development Corporation Ltd. Bhopal, India

- Engineered core GIS features — configurable basemap switching, line/polygon drawing tools, KML upload, and buffer creation — improving spatial analysis and mapping flexibility by **30-35%**.
- Redesigned the vector editing workflow, speeding up geospatial data processing by **25%** and reducing data discrepancies.
- Tech Stack:** React, QGIS, MySQL, Git.

Full Stack Developer ([Intern](#))

January 2024 - March 2024

Calculus CarbonRemote

- Developed a responsive front-end architecture using Next.js, improving user experience and application scalability by **30-35%**.
- Built a full-stack Risk Analysis Tool with Next.js and PostgreSQL, simplifying data processing and speeding up decision-making by **25-28%**.
- Tech Stack:** Next.js, React, TypeScript/JavaScript, PostgreSQL, REST APIs, Node.js, HTML/CSS, Git.

PROJECTS

Flight Booking AI (React, Node.js, Express, Python, Flask, OpenAI, RapidAPI)

- Built a full-stack system connecting a React frontend, Node.js/Express middleware, and a Python/Flask AI service to support natural-language flight search.
- Implemented OpenAI function calling to parse user intent and extract structured flight parameters, routing queries through a modular RapidAPI adapter built for testability and easy provider swaps.

ACHIEVEMENTS AND HONORS

- Solved 400+ Data Structures & Algorithms problems on [LeetCode](#).
- Regional Finalist, TCS AI Hackathon (Top 3, Indore): built an AI solution using Python, vector embeddings, and RAG.
- National-level Football Player, CBSE Cluster Nationals, St. Joseph Co-Ed School — November 2019.

EDUCATION

B.Tech in Computer Science Engineering (Specialization: Gaming) Sept 2020 - Oct 2024

Vellore Institute of Technology, Bhopal, India CGPA: 8.22
